THE PROBLEM

Small and medium painting businesses waste time on back-and-forth WhatsApp communication, scattered customer enquiries, and inconsistent follow-ups.

- CUSTOMER SENDS A MESSAGE
- OWNER ASKS SEVERAL QUESTIONS
- DETAILS ARE COPIED MANUALLY
- QUOTATION IS DELAYED

OUR SOLUTION

Giser.AI uses AI to analyze customer messages, voice notes, and images, extract job requirements, and identify missing details. It generates job briefs with estimated costs, materials, and available time slots, enabling managers to accept or decline jobs with one click.

Before Giser.ai	With Giser.ai
Manually read and organise messages	Structured job details
Prepare drafts from scratch	AI-assisted quotation draft
Remember follow-ups manually	Organised follow-up tasks

HOW GESIR.AI WORKS?

1

Trigger

A customer enquiry arrives through WhatsApp or a simulated chat input.

2

Connected data

Retrieve available service details, pricing rules and job information

3

AI & decision logic

Extract details, identify missing information and prepare a quotation draft using defined rules.

4

Human approval

The owner checks and approves the draft before it is sent.

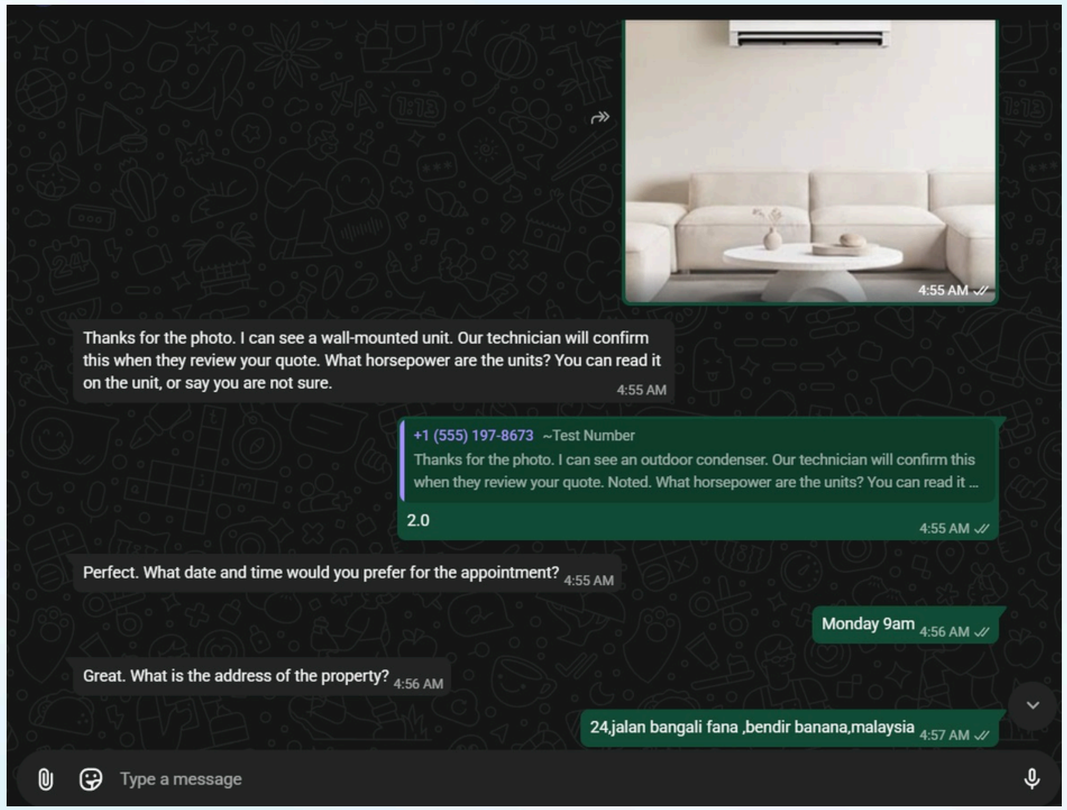

5

Visible outcome & activity log

Display the result and record the draft, approval and action status.

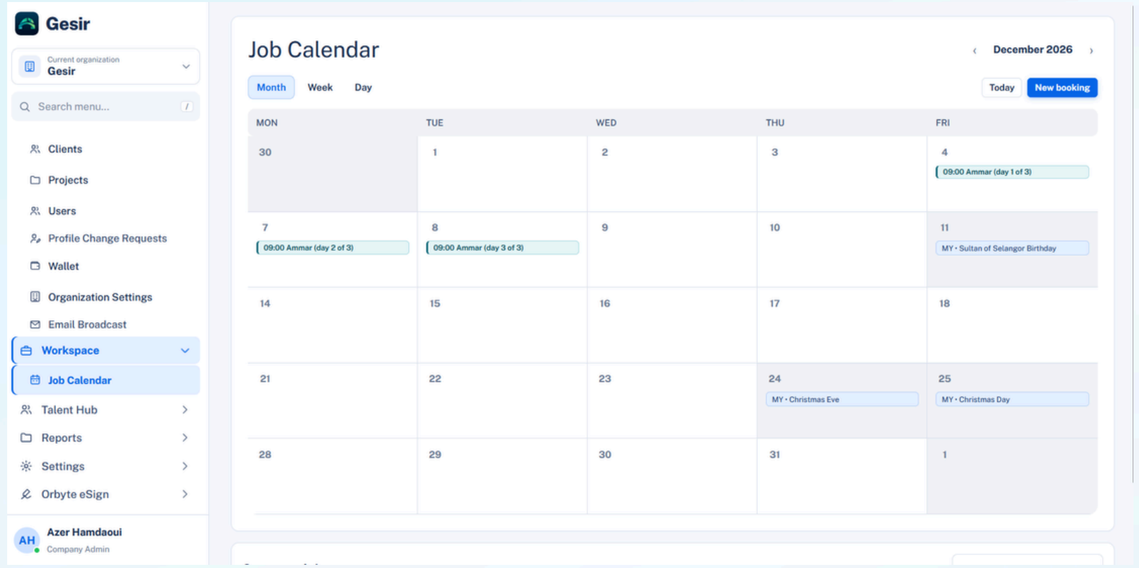

1) TRIGGER:

A customer sends a painting enquiry. Gesir.AI receives it through WhatsApp integration, creates a new enquiry record and starts processing it.

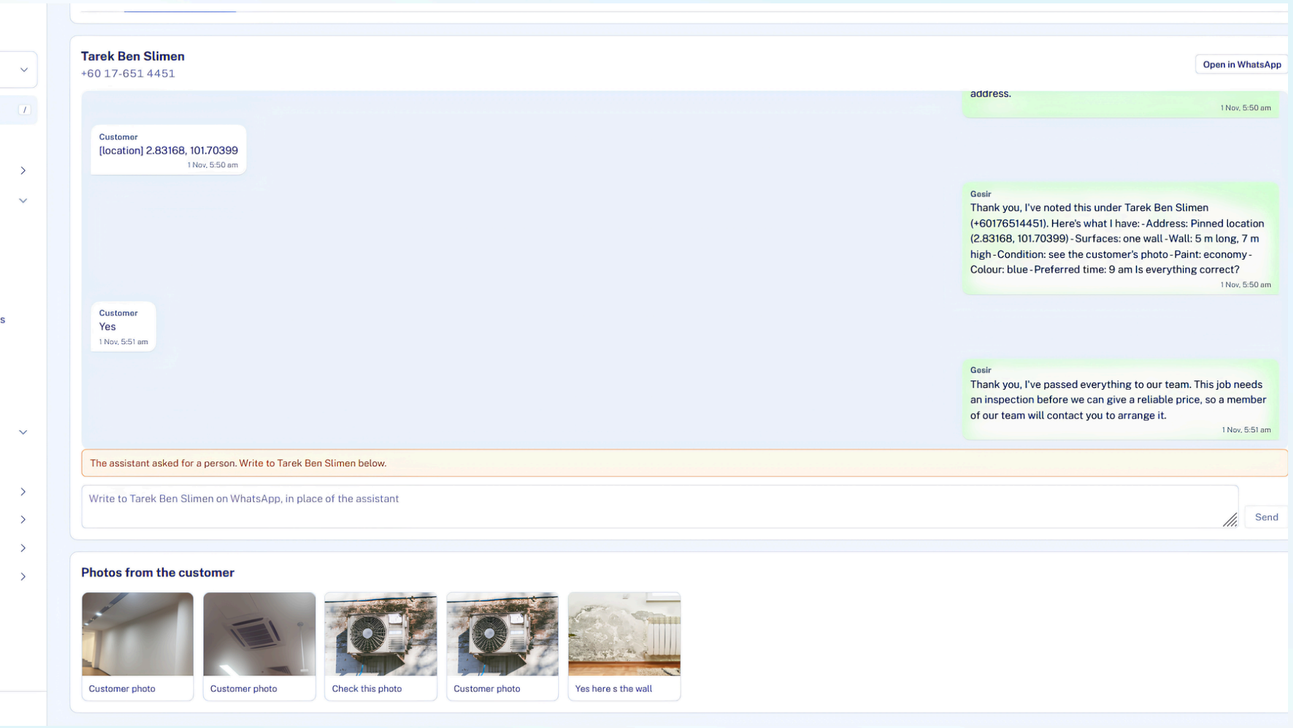

2) CONNECTED DATA:

Gesir.AI retrieves predefined pricing rules, paint types and material information, available appointment slots, and business quotation templates.

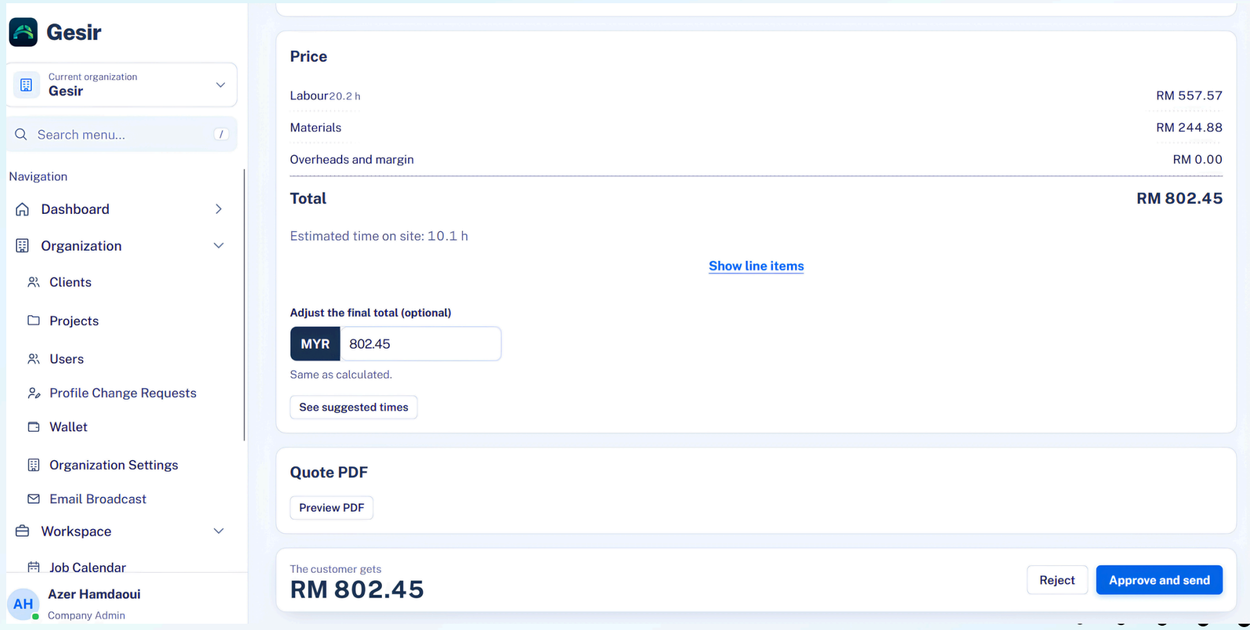

3) AI & DECISION LOGIC

AI extracts the service and preferred date,Rules check finds missing room size and location, then asks the customer before quoting.

4) HUMAN APPROVAL

The owner reviews job details and costs, and can approve, reject or request edits.

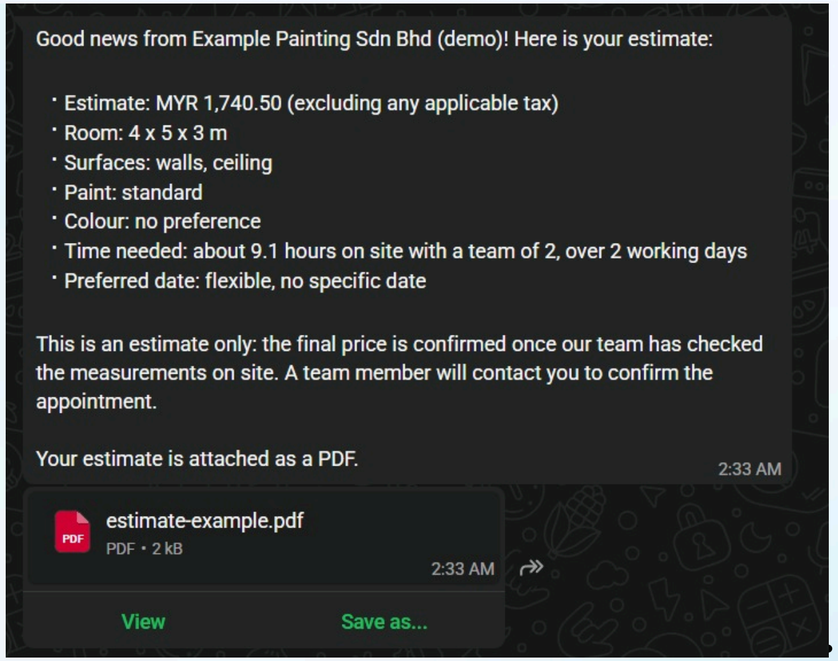

5) ACTIVITY LOG & OUTCOME

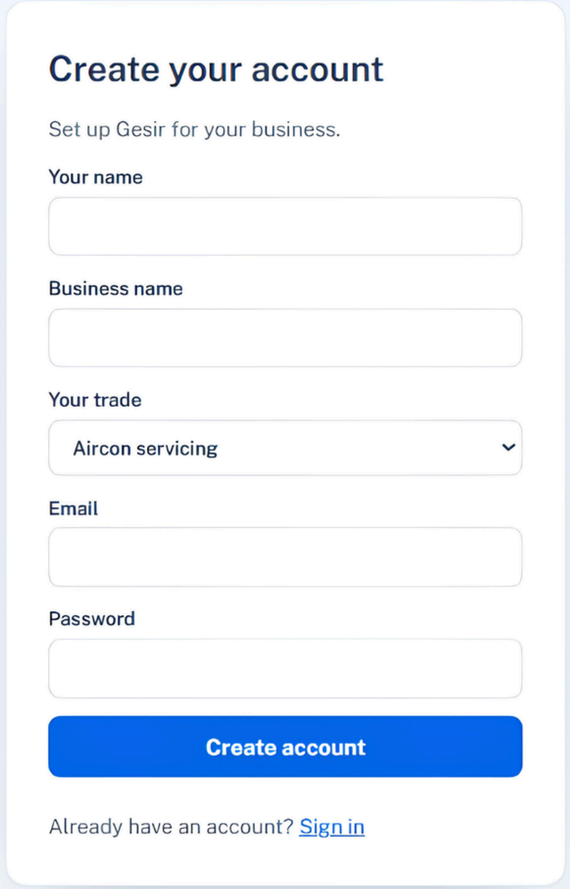

The system records:

- **What action occurred.**
- **When it occurred.**
- **Whether the quotation was approved or rejected.**
- **The resulting status.**

Project	Client	Status	Source	Amount	Updated	
Aircon service for Tarek Ben Slimen general service	Tarek Ben Slimen +60 17-651 4451	Pending AI extraction	Gesir	-	2 min ago	Open
Repaint for Ammar walls, ceiling	Ammar +60 11-127 16707	Quote sent	Gesir	RM 1,608.13	3 h ago	Open
Aircon service for Aam Salah chemical wash, 2 units, 2.0 HP	Aam Salah +21656138490	Needs your approval	Gesir	RM 434.37	19 h ago	Open

6)A SECOND BUSINESS:

Aircon Servicing Adaptation:

- **Intake: Captures unit count, horsepower, and service type (chemical vs. normal wash).**
- **Setup: Select trade dropdown, input rate card, launch immediately.**
- **Architecture: 100% same pipeline, only extraction schema and pricing rules swap.**

Business Impact & SDG Relevance

Prototype performance benchmarks & UN sustainable development goals

Weekly Time on Client Support

88% FASTER ACHIEVED

10–15 h/w → 4 h/w

Verified via FastAPI webhook timestamps

➔ **Surpassed Phase 1 target of 85% efficiency gain**

Cost per Support Interaction

56–90% CHEAPER

$6–$8 → $0.40–$3

Verified via RunPod & Vapi metrics

➔ **Baseline: Phone ($6–$8) & Email/Chat ($3–$5) vs. Autonomous AI agent**

SDG 8.2 · TECHNOLOGICAL UPGRADING

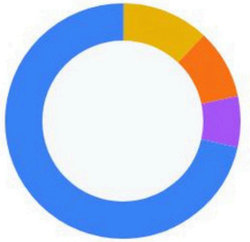

Productivity through automation and AI-driven workflow innovation.

SDG 8.3 · SME GROWTH

Support entrepreneurship and digital capacity for micro painting firms.

Outcomes (2,100 Attempts)

- 71.4% Success
- 7.2% Wrong measurements
- 9.5% Failed call
- 11.9% Failed job briefing

Technical Feasibility & Risks

Reliability architecture, active mitigations & regulatory compliance

1

SYNTHETIC DATA

Real Price Dataset: Extracted directly from validated painting contractor benchmarks.

Fictional Records: Zero personal records used during MVP development and testing.

✓ Fully Isolated Testing Environment

2

Technical Risk

Extraction Errors: AI parsing imprecise room dimensions or customer job requirements from free-form chat.

3

Engineered Mitigations

Deterministic Pricing: Pricing logic is locked and rule-based—no AI hallucination.

Human-in-the-Loop: Mandatory owner review and approval before any quote is sent.

4

Malaysia PDPA Compliance

Strict consent-driven data handling, encrypted customer PII storage, and localized communication channels.

BUSINESS MODEL

Target(s):

- **Primary:**
  Painting shops
- **Secondary:**
  home-service ecosystem

Revenue Model:

Monthly subscription with usage-based tiers

Customer Value:

Less repetitive admin and faster quotation turnaround.

CONCLUSION

"Gesir.ai doesn’t replace trade contractors, it handles the midnight admin so they can grow their business while staying 100% in control."
